Q19 - Web Fragments Ordering

Considering the ordering of web fragments, which statements are true:

a. The order of web fragments scanning/discovering is always unspecified, and it depends on the container specific implementation,

b. The order of web fragments scanning/discovering is always specified, and it depends on the web-fragment.xml's `<name>` element value

c. The order of web fragments scanning/discovering is always specified, and it depends on the web-fragment.xml's `<order>` element value

d. The order of web fragments scanning/discovering is always specified, and it depends on the alphabetical order of JARs in which the web-fragments are located in

e. The order of web fragments scanning/discovering is unspecified by default, but the ordering rules can be specified in the Deployment Descriptor

Hide answer

---

e

Reference: page 66, 8.2.2 "Ordering of web.xml and web-fragment.xml"

Explanation: The order of web fragments discovery can be defined **only** if the ordering rules (`<ordering>` or `<absolute-ordering>`) are defined in the Deployment Descriptor.
